SOURCE

The leaves of *Nelumbo nucifera*.

BIOLOGICAL ACTIVITY OR INHIBITORS

Nuciferine, extracted from *Nelumbo nucifera*, can stimulate both phases of insulin secretion in isolated islets by closing potassium-adenosine triphosphate channels [1]

(--)-Nuciferine may be used as a systemically effective, rather selective blocker of central glutamate receptors. [2].

Nuciferine is a major active aporphine alkaloid from the leaves of *N. nucifera* Gaertn that possesses anti-hyperlipidemia, anti-hypotensive, anti-arrhythmic, and insulin secretagogue activities; nuciferine supplementation can ameliorate HFD-induced dyslipidemia as well as liver steatosis and injury, the beneficial effects of nuciferine are associated with altered expression of hepatic genes involved in lipid metabolism. [3]

Nuciferine downregulates Per-Arnt-Sim kinase expression during its alleviation of lipogenesis and inflammation on oleic acid-induced hepatic steatosis in HepG2 cells, it [4]

Nuciferine inhibits tumor-promoting effect of nicotine involving Wnt/ β -catenin signaling in non-small cell lung cancer, it presents a potential novel alternative to NSCLC prevention [5]

Nuciferine can restore potassium oxonate-induced hyperuricemia and kidney inflammation in mice, suggests that a dietary supplement of nuciferine rich in lotus leaf may be potential for the prevention and treatment of hyperuricemia with kidney inflammation. [6]
