BIOLOGICAL ACTIVITY OR INHIBITORS

Lycopene is the pigment principally responsible for the characteristic deep-red color of ripe tomato fruits and tomato products, is a natural antioxidant; an industrial scale, environmentally friendly lycopene extraction and purification procedure with minimal loss of bioactivities is highly desirable for the foods, feed, cosmetic, and pharmaceutical industries, high-quality lycopene products that meet food safety regulations will offer potential benefits to the food industry. [1]

Lycopene is the most efficient biological carotenoid singlet oxygen quencher. [2]

Lycopene is a more potent inhibitor of human cancer cell proliferation than either alpha-carotene or beta-carotene, dietary consumption of the carotenoid lycopene (mostly from tomato products) has been associated with a lower risk of prostate cancer. [3,4]

Lycopene is an antioxidant scavenger, hypolipemic agent, inhibitor of pro-inflammatory and pro-thrombotic factors, thus potentially of benefit in cardiovascular disease (CVD), supplementation of low doses of lycopene has been already suggested as a preventive measure for contrasting and ameliorating many aspects of CVD. [5]
