BIOLOGICAL ACTIVITY OR INHIBITORS

Ethyl caffeate has antifibrotic activity, it can be considered as a promising natural [1]
Ethyl caffeate has anti-inflammatory activity, it can suppress NF- κ B activation and its downstream inflammatory mediators, iNOS, COX-2, and PGE2 in vitro or in mouse skin [2]
Ethyl caffeates is an inhibitor in complex with human pancreatic α -amylase, it may present [3]
Ethyl caffeate has antioxidant activity, is effective in preventing the development of oxidized flavor for at least 6 mo. or longer in the absence of added Cu in milk. [4]
Ethyl caffeate has neuroprotection against hydrogen peroxide and lipopolysaccharide induced injury via modulating arachidonic acid network and p38-MAPK signaling, it be considered as a therapeutic candidate for prevention and treatment of neurodegenerative diseases involving oxidative stress or/and inflammation. [5]
Ethyl caffeate can mediate inhibition of cell proliferation in SKOV-3 cells and the effect was accompanied by reduced expression of cell cycle-related proteins such as cyclin-dependent kinases and cyclins, resulting in pRb hypophosphorylation and G1 phase cell cycle arrest; it markedly inhibits cell migration and invasion; these findings suggest further evaluation and development of ethyl caffeate for the treatment and prevention of ovarian cancer.
