BIOLOGICAL ACTIVITY OR INHIBITORS

Plantamajoside has antibacterial activity, and has inhibition activity against cAMP phosphodiesterase and 5-lipoxygenase and antioxidant activity. [1]

Plantamajoside is a bioactive caffeic acid derivative, a dihydroxyphenethyl glucoside in the group of polyphenolic compounds, it is a protective agent against ultra-violet light in plants and acts as antioxidant agent with very low toxicity. [2]

Plantamajoside ameliorates lipopolysaccharide-induced acute lung injury via suppressing NF- κ B and MAPK activation, thus, it may be a potential therapy for the treatment of pulmonary inflammation. [3]

Plantamajoside can inhibit UVB and advanced glycation end products-induced MMP-1 Expression by suppressing the MAPK and NF- κ B pathways in HaCaT cells, and attenuate the upregulation of receptor for AGEs (RAGE) by glycer-AGEs with UVB irradiation, suggests that it is a promising inhibitor of skin photoaging.[4]

Plantamajoside is a potential anti-tumor herbal medicine inhibits breast cancer growth and pulmonary metastasis by decreasing the activity of matrix metalloproteinase-9 and -2.[5]
