SOURCE

The rhizomes of *Hemsleya amabilis* Diels.

BIOLOGICAL ACTIVITY OR INHIBITORS

Cucurbitacin E has been identified by an empiric screening strategy as a sterol with potent growth inhibitory activity in vitro directed against prostate carcinoma explants (Ic50 of 7-50 nM in 2- to 6-day exposures), cucurbitacins are potent disruptors of cytoskeletal integrity, prostate carcinoma cells appear notably sensitive to growth inhibition by cucurbitacin E.[1] Cucurbitacin E inhibits tumor angiogenesis through VEGFR2-mediated Jak2-STAT3 signaling pathway.[2]

Cucurbitacins act as feeding inhibitors for the flea beetle *Phyllotreta nemorum*, the most potent feeding inhibitors in green parts of *I. amara* towards *P. nemorum* are cucurbitacin E and I, and the concentrations of these compounds in the plant are found to be high enough to prevent feeding of the flea beetle. [3]

Cucurbitacin E exerts anti-inflammatory actions, it is potentially useful in treating inflammation through the inhibition of and but not ROS.[4]

Cucurbitacin E has immunomodulatory effect.[5]

Cucurbitacin B and E have potent anti-inflammatory and analgesic action.[6]
