BIOLOGICAL ACTIVITY OR INHIBITORS

Gastrodin has anti-inflammatory activity, can significantly attenuate levels of neurotoxic proinflammatory mediators and proinflammatory cytokines by inhibition of the NF- κ B signaling pathway and phosphorylation of MAPKs in LPS-stimulated microglial cells, suggests that gastrodin has a potential as an anti-inflammatory drug candidate in neurodegenerative diseases.[1]

Gastrodin protects midbrain of MPTP-intoxicated mice against oxidative stress, in part, through interrupting ERK1/2-Nrf2 pathway mechanism, which will give us an insight into the potential of gastrodin in terms of opening up new therapeutic avenues for PD.[2] Gastrodin is one of the natural compound isolated from *Gastrodia elata* and has anticonvulsant effects, it may cause the elevation of GABA concentration by inhibiting the GABA shunt.[3]

Gastrodin activates PI3-K/Akt signaling and that inhibition of this pathway reverses the inhibitory effects of gastrodin on NF- κ B and MAPKs activation in H9c2 cardiomyocytes.[4] Gastrodin can inhibit allodynia and hyperalgesia in painful diabetic neuropathy rats by decreasing excitability of nociceptive primary sensory neurons.[5]

Gastrodin has protective effect to the prevention of neurotoxicity induced by ischemic stroke, the mechanism is by improving anti-oxidant and anti-inflammation activities, inhibiting apoptosis pathway, and increasing Akt phosphorylation and Nrf2 expression.[6]
