BIOLOGICAL ACTIVITY OR INHIBITORS

Theobromine and theophylline occur in plants used in the preparation of a number of widely consumed drinks, chromosome abnormalities are caused by both theobromine and theophylline in plant cells and in mammalian cells in culture, and both have anti-mitotic activity.[1]

Theobromine is a novel and promising treatment, which may form the basis for a new class of antitussive drugs, it can suppress capsaicin-induced cough with no adverse effects, it also can directly inhibit capsaicin-induced sensory nerve depolarization of guinea-pig and human vagus nerve suggestive of an inhibitory effect on afferent nerve activation.[2]

Theobromine, caffeine, and xanthine have a quenching effect on the production of hydroxyl radicals, as well as on oxidative DNA breakage by hydroxyl radicals, they have antioxidants and also capable of prooxidant action. [3]
