BIOLOGICAL ACTIVITY OR INHIBITORS

6-Gingerol, a natural product of ginger, has been known to possess anti-tumorigenic and pro-apoptotic activities, it stimulates apoptosis through upregulation of NAG-1 and G1 cell cycle arrest through downregulation of cyclin D1, multiple mechanisms appear to be involved in 6-gingerol action, including protein degradation as well as β -catenin, PKC ϵ , and GSK-3 β pathways. ^[1]

6-Gingerol and 6-shogaol may both exert anti-invasive activity against hepatoma cells through regulation of MMP-9 and TIMP-1, inhibition of the MAPK and PI3k/Akt pathways and NF- κ B and STAT3 activities to suppress expression of MMP-2/-9 and uPA and block angiogenesis, and that 6-shogaol could further regulate urokinase-type plasminogen activity.^[2,3]

6-Gingerol can repress quorum sensing (QS)-induced genes, specifically those related to the production of virulence factors, inducing exoprotease, rhamnolipid, and pyocyanin.^[4]

6-Gingerol has antioxidant and anti-inflammatory activities, it induces genotoxicity probably by oxidative stress; lysosomal and mitochondrial damage were observed in 6-gingerol-induced toxicity.^[5]

6-Gingerol has anti-adipogenic activity, can effectively suppress adipogenesis and that it exerts its role mainly through the significant down-regulation of PPAR γ and C/EBP α and subsequently inhibits FAS and aP2 expression, also inhibit differentiation in 3T3-L1 cells by attenuating the Akt/GSK3 β pathway. ^[6]
