### SOURCE

The rhizome of *Zingiber officinale* Roscoe.

### BIOLOGICAL ACTIVITY OR INHIBITORS

Galangin, the major antimicrobial compound isolated from the shoots of *Helichrysum aureonitens*, it shows significant antiviral activity against HSV-1 and CoxB1, limited activity against reovirus, and no antiviral activity against Ad31.[1]

Galangin has anti-genotoxicity, it acts as a cancer chemopreventive agent candidate.[2]

Galangin shows an inhibitory effect on acetylcholinesterase (AChE) activity with the IC<sub>50</sub> of 120 microM and an enzyme-flavonoid inhibition constant (K<sub>i</sub>) of 74 microM, suggests that it could be potential candidates for further development of new drugs against Alzheimer's disease (AD). [3]

Galangin induces apoptosis of hepatocellular carcinoma cells via the mitochondrial pathway.[4]

Galangin has vasorelaxant effects, it reduces the contractility of rat aortic rings through an endothelium-dependent mechanism, involving NO, and also through an endothelium-independent mechanism, inhibiting calcium movements through cell membranes.[5]

Galangin is effective as anti-proliferative, and apoptotic agent in Bcr-Abl expressing K562 and KCL22 cells and in imatinib mesylate resistant K562-R and KCL22-R cells; it increases the cytotoxic activity of imatinib mesylate in imatinib-sensitive and imatinib-resistant Bcr-Abl expressing leukemia cells, suggests that galangin is an interesting candidate for a combination therapy in the treatment of imatinib-resistant leukemias.[6]

Galangin can down-regulate mast cell-derived allergic inflammatory reactions by blocking histamine release and expression of pro-inflammatory cytokines, in light of in vitro and in vivo anti-allergic inflammatory effects, it could be a beneficial anti-allergic inflammatory agent.[7]

Galangin has anti-clastogenic effects against bleomycin-induced chromosomal aberrations in mouse spleen lymphocytes.[8]

Galangin has antibacterial activity, the topoisomerase IV enzyme may therefore be implicated in the antibacterial mechanism of action of galangin.[9]

Galangin has anti-inflammatory effects on lipopolysaccharide-activated macrophages via ERK and NF-κB pathway regulation.[10]

Galangin produces anti-obesity effects in cafeteria diet (CD)-fed rats, this may be mediated through its pancreatic lipase inhibitory, hypolipidemic and antioxidant activities.[11]
