BIOLOGICAL ACTIVITY OR INHIBITORS

Isoliquiritigenin(ILTG), a flavonoid constituent in the root of Glycyrrhiza glabra, has vasorelaxant effect, anti-platelet, anti-allergic and antiviral activities, also has protective effects in transient middle cerebral artery occlusion-induced focal cerebral ischemia in [1]

Insampaedoksan is a traditional herbal medicine used for antipyretic and antiinflammatory [2]

Isoliquiritigenin significantly inhibits the proliferation of prostate and lung cancer cell lines in a dose-dependent and time-dependent manner, suggests that it is a candidate agent for the treatment of prostate□lung cancer and GADD153 may play an important role [3,4]

regulating the expression of specific molecules.

Isoliquiritigenin can inhibit IκB kinase activity and ROS generation to block TNF-α induced expression of cell adhesion molecules on human endothelial cells, these results have important implications for using ILTG or its derivatives towards the development of

[6]

[7]

Isoliquiritigenin has the ability to protect cells from AA+iron-induced H₂O₂ production and mitochondrial dysfunction, which is mediated with GSK3β phosphorylation downstream of
