### BIOLOGICAL ACTIVITY OR INHIBITORS

---

Ginsenoside-Rg5 (G-Rg5), a newly discovered diol-containing ginsenoside, G-Rg5 blocks cell cycle of SK-HEP-1 cells at the G1/S transition phase by down-regulating cyclin E-dependent kinase activity and that the down-regulation of cyclin E-dependent kinase activity is caused mainly by induced CDK2 inhibitor, p21Cip/WAF1 and decreased levels of cyclin E.[1]

Ginsenosides Rg5 and its metabolite ginsenoside Rh3 suppress swelling of oxazolone-induced mouse ear contact dermatitis, they also reduce mRNA expressions of cyclooxygenase-2, interleukin (IL)-1 $\beta$ , tumor necrosis factor (TNF)- $\alpha$  and interferon (IFN)- $\gamma$ ; the inhibition of ginsenoside Rh3 is more potent than that of ginsenoside Rg5; suggests that ginsenoside Rh3 metabolized from ginsenoside Rg5 may improve chronic dermatitis or psoriasis by the regulation of IL-1 $\beta$  and TNF- $\alpha$  produced by macrophage cells and of IFN- $\gamma$  produced by Th cells.[2]

Ginsenoside Rg5 plays a novel role as an insulin-like growth factor-1 receptor , it promotes therapeutic and improves without adverse effects in the vasculature.[3]

Ginsenoside Rg5 ameliorates lung inflammation in mice by inhibiting the binding of LPS to toll-like receptor-4 on macrophages.[4]

Ginsenoside Rg5 improves cognitive dysfunction and beta-amyloid deposition in STZ-induced memory impaired rats via attenuating neuroinflammatory responses, suggests that Rg5 could be a beneficial agent for the treatment of Alzheimer's disease (AD). [5]

Ginsenoside-Rg5 induces apoptosis and DNA damage in human cervical cancer cells , it has marked genotoxic effects in the HeLa and MS751 cells and, thus, demonstrates potential as a genotoxic or cytotoxic drug for the treatment of cervical cancer.[6]

Ginsenoside Rg5 may be metabolized in vivo to ginsenoside Rh3 by human intestinal microflora, and ginsenoside Rh3 may improve anti-allergic diseases, such as rhinitis and dermatitis.[7]

Ginsenoside Rg5 has anti-inflammatory effect, it suppresses ROS production with upregulation of hemeoxygenase-1 (HO-1) expression in lipopolysaccharide-stimulated BV2 cells, it may provide a therapeutic potential for various neuroinflammatory disorders.[8]
