BIOLOGICAL ACTIVITY OR INHIBITORS

Liriodendrin, isolated by activity-guided fractionation from the ethyl acetate extracts of the stem bark of *Acanthopanax senticosus*, has anti-inflammatory and antinociceptive activities; it (5, 10 mg/kg/day, p. o.) significantly inhibits the increase of vascular permeability induced by acetic acid in mice and reduced an acute paw edema induced by carrageenan in rats; it shows analgesic activity in a dose-dependent inhibition in animal models.[1]

Liriodendrin has protective effects on dopamine-induced cytotoxicity via its anti-oxidative properties by reducing ROS level and anti-apoptotic effect via protection of mitochondrion membrane potential ($\Delta\Psi_m$), the effect of liriodendrin may involve the P53 pathway in apoptosis, suggests that it may provide a useful therapeutic strategy for the treatment of neurodegenerative diseases such as Parkinson's disease (PD).[2]

Liriodendrin may be a potent suppressor of CaCl₂-induced arrhythmias, the prophylactic administration of liriodendrin is effective in prolonging latency of arrhythmia and reducing the occurrence of ventricular fibrillation from 75% to 25%, the antiarrhythmic effect of liriodendrin (5.0 mg/kg) is similar to that of verapamil (1.05 mg/kg). [3]

Liriodendrin has inhibitory activities on gastritis and gastric ulcer, it can inhibit colonization of *Helicobacter pylori* effectively, it could be utilized for the treatment and/or protection of gastritis and gastric ulcer.[4]

Liriodendrin regulates lung inflammation, the phosphorylation of the NF- κ B (p65) and expression of vascular endothelial growth factor (VEGF), liriodendrin treatment significantly improved the survival rate of mice with cecal ligation and puncture (CLP)-induced sepsis, liriodendrin prevents the generation of reactive oxygen species (ROS) by upregulating the expression of SIRT1 in RAW 264.7 cells, suggests that liriodendrin plays protective role in sepsis-induced acute lung injury.[5]

Liriodendrin is thought to be found firstly in this plant, and the fraction extracted from *Kalopanax septemlobus* (-Thunb.) Koidz. in Guangxi shows an excellent hypoglycemic activity.[6]
