### BIOLOGICAL ACTIVITY OR INHIBITORS

Kirenol is a major diterpenoid components of Herba Siegesbeckiae, which has been applied for arthritic therapy for centuries, it shows anti-inflammatory effect in rats, it also exerts a potent anti-arthritic effect in collagen-induced arthritis by modifying the T cells balance, thus, kirenol may be a potential immunosuppressant for the treatment for rheumatoid arthritis [1]

Kirenol can upregulate nuclear Annexin-1 which interacts with NF- $\kappa$ B to attenuate synovial inflammation of collagen-induced arthritis in rats.[2]

Kirenol, a natural diterpenoid compound, has been reported to possess anti-oxidant, anti-inflammatory, anti-allergic, and anti-arthritic activities; it is capable of inhibiting the differentiation and lipogenesis of 3T3-L1 adipocytes through the activation of the Wnt/ $\beta$ -catenin signaling pathway, suggesting its potential as natural anti-obesity agent.[3] Kirenol is effective against gram-positive bacteria. [4]

Kirenol has significant potential for its discovery as a new lead compound for management of topical pain and inflammation.[5]

Kirenol can attenuate experimental autoimmune encephalomyelitis by inhibiting differentiation of Th1 and th17 cells and inducing apoptosis of effector T cells.[6]

Kirenol possesses antitumor action on human chronic myeloid leukemia K562 cells in vitro, it may have therapeutic potential for the treatment of cancer that deserves further investigation. [7]

Kirenol is capable of promoting osteoblast differentiation in MC3T3-E1 cells through activation of the BMP and Wnt/ $\beta$ -catenin signaling pathways, suggesting that it is a potential candidate target for treating or preventing osteoporosis.[8]
