### SOURCE

The fruits of *Arctium lappa* L.

### BIOLOGICAL ACTIVITY OR INHIBITORS

Arctiin, a lignan isolated from *Arctium lappa* (burdock) seeds, has a protective effect on 2-amino-1-methyl-6-phenylimidazo[4,5-b]pyridine (PhIP)-induced carcinogenesis particularly in the mammary gland in the promotion period, it may have a weak co-carcinogenic influence on MeIQx-induced hepatocarcinogenesis. [1]

Arctiin has been reported to have anti-inflammatory, anti-oxidant, antibacterial, and antiviral effects in vitro, it may exert anti-inflammatory effect by inhibiting the pro-inflammatory mediators through the inactivation of NF- $\kappa$ B.[2]

Arctiin significantly induces cell detachment and decreases the cell numbers via the up-regulation of MUC-1 mRNA and protein in PC-3 cells.[3]

Arctiin down-regulates cyclin D1 protein expression and that this at least partially contributes to the anti-proliferative effect of arctiin.[4]

Arctiin has ameliorative effects on glomerulonephritis is carried out mainly by suppression of NF- $\kappa$ B activation and nuclear translocation and the decreases in the levels of these pro-inflammatory cytokines, while SOD is involved in the inhibitory pathway of NF- $\kappa$ B activation; arctiin has favorable potency for the development of an inhibitory agent of NF- $\kappa$ B and further application to clinical treatment of glomerulonephritis, though clinical studies are required.[5]

Arctiin induces an UVB protective effect in human dermal fibroblast cells through microRNA expression changes. [6]

Arctigenin and arctiin have antiproliferative effect.[7]
