BIOLOGICAL ACTIVITY OR INHIBITORS

Sweroside and swertiamarine are main constituents in Gentian (*Gentiana lutea* ssp. *symphyandra*), Gentian has wound healing activity, seems to be mainly due to the increase in the stimulation of collagen production and the mitotic activity by sweroside and swertiamarine, respectively; they also have cytoprotective effects, which may cause a synergism in terms of wound healing activity of Gentian. [1]

Sweroside has the anti-osteoporotic effect on the MG-63 cells and osteoblasts, it has a direct osteogenic effect on the proliferation and differentiation of cultured MG-63 cells and osteoblasts in vitro. [2]

Sweroside can inhibit potent melanogenesis in melan-a cells at 300uM without cytotoxicity, also decreases tyrosinase, tyrosinase-related protein-1 (TRP-1) and TRP-2 protein production in melan a cells, it may be an effective skin-whitening agent through the regulates the expression of MAP kinase and melanogenic enzymes. [3]

Sweroside and gentiopicroside suppress Pck1 expression and induce phosphorylation of components in the insulin signalling cascade, demonstrates that sweroside and gentiopicroside show insulin-mimicking effects on the regulation of Pck1 expression. [4]
