BIOLOGICAL ACTIVITY OR INHIBITORS

Insampaedoksan is a traditional herbal medicine used for antipyretic and antiinflammatory diseases, isoliquiritigenin is the main compound of it , thus , isoliquiritigenin has bioactivity effects such as antioxidant, estrogenic and anticancer. [1]

Isoliquiritin, liquiritin, and isoliquiritigenin are the active polyphenols present in Glycyrrhiza uralensis which has been used for the treatment of cancer and its complications, they induce apoptotic cell death through up-regulating p53 and p21 in the A549 non-small cell lung cancer cells and inhibit the p53-dependent pathway and showed crosstalk between Akt activities, suggests they can be an alternative agent for the treatment of lung cancer.[2] Isoliquiritin and liquiritin produce significant antidepressant-like effects, and their mechanism of action may be due to increased 5-HT and NE in the mouse hippocampus, hypothalamus and cortex.[3]

Isoliquiritin has antifungal activity, and has inhibitory effect against peronophythora litchi chen through a membrane damage mechanism, it may be used as a natural alternative to commercial fungicides or a lead compound to develop new fungicides for the control of litchi downy blight.[4]

Isoliquiritin has anti-tumor activity, can induce hepatoma cell apoptosis in H22-bearing mice by down-regulating the expression of Bcl-2 and up-regulating expression of Bax, Cyt-c and Caspase-3, it can also induce the apoptosis in MDA-MB-231 cells.[5]
