BIOLOGICAL ACTIVITY OR INHIBITORS

Tilioside, a dietary flavonol glycoside from the flowers of *Tilia argentea* (linden), shows a hepatoprotective effect against D-galactosamine (D-GalN)/lipopolysaccharide (LPS)-induced liver injury in mice.[1]

Tilioside has anti-inflammatory and antioxidant activity, it can significantly reduce the oedema and leukocyte infiltration induced by 12-O-tetradecanoylphorbol 13-acetate (TPA).[2]

Tilioside shows very potent anti-complement activity ($IC_{50}=5.4 \times 10^{-5}$ M) on the classical pathway of the complement system. [3]

Tilioside and gnapthaliin are antioxidants against in vitro Cu^{2+} -induced LDL oxidation in the same order of magnitude compared to that of the reference drug, probucol.[4]

Tilioside has anti-diabetic effects, the effects at least partially mediated through inhibitory effects on carbohydrate digestion and glucose uptake in the gastrointestinal tract.[5]

Tilioside has shown in vivo anti-inflammatory activity; it also can inhibit neuroinflammation in BV2 microglia through a mechanism involving TRAF-6-mediated activation of NF- κ B and p38 MAPK signalling pathways, these activities are possibly due, in part, to the antioxidant property of this compound.[6]
